

Job Title: Production Support Engineer / Associate Software Engineer

Location: Gurgaon

Work Mode: Work From Office

Below is the Job Description:

We are looking for a proactive and detail-oriented **Production Support Engineer / Associate Software Engineer** to join our team. The candidate will be responsible for monitoring applications, resolving incidents, and ensuring smooth day-to-day operations in a production environment.

Key Responsibilities

- Monitor application performance, system alerts, logs, and scheduled jobs.
- Investigate and resolve L1/L2 production issues within defined SLAs.
- Review and analyze Python application logs to identify the root cause of errors.
- Collaborate with Development, QA, and Infrastructure teams for issue resolution.
- Work on Windows for file handling, log analysis, and service management.
- Monitor message queues, processing delays, and system performance in RabbitMQ.
- Document incident details, solutions, and Standard Operating procedures (SOPs).
- Participate in deployment activities, smoke testing, and release validations.
- Ensure timely communication with stakeholders about issue status and resolutions.
- Follow internal incident, problem, and change management processes.

Required Skills

- Basic understanding of Python concepts (variables, data types, loops, functions, exceptions).
- Ability to read and interpret Python error logs (tracebacks, exceptions, missing modules, key errors, type errors, etc.).
- Good to have basic knowledge of RabbitMQ and Grafana.
- Familiarity with cloud basics (AWS/GCP/Azure) is an advantage.
- Good analytical and problem-solving skills.
- Strong communication and documentation skills.
- Ability to learn quickly and work under minimal supervision.
- Open to work in rotational shifts.

Educational Qualification

- Bachelor's degree in Computer Science, IT, Electronics, or related fields (B.Tech/MCA).
